

Create a competitive foundation

HPE Solutions for General Purpose

Solution brief

Remove barriers to success

As a small to midsize business (SMB), you've got to keep moving at full speed to keep up with customer expectations—and the competition. But in today's "digital everything" workplace, it can be challenging to provide flexible IT resources to meet a variety of modern business demands.

If you're using laptops, PCs, cloud applications, or even an older server to run the business, it may be time for an upgrade. But finding the right solution can be a challenge as well. Specialized server solutions can be costly because they include

more bells and whistles than are required. But the one-size-fits-all approach never seems to fit right either.

For many SMB needs, one or two modern, flexibly configured servers can provide everything you need to keep moving at top speed—and keep the competition at bay.

HPE Solutions for General Purpose are built on flexible configurations of HPE ProLiant rack and tower servers, optimized for general purpose workloads. They come in a variety of sizes suited—and priced—to meet your needs.

Enterprise proven, sized right **Easily evolve to hybrid cloud**

HPE Solutions for General Purpose are based on HPE ProLiant Gen10 rack and tower servers in low-cost, basic server configurations you can customize by adding one of the recommended modules. These modules provide the following functionality:

- **File and print:** Storage capacity for file storage with sufficient memory to run print jobs and the operating system.
- **Infrastructure:** Memory capacity to load various Active Directory, DNS, and DHCP databases into memory for service responsiveness, with sufficient storage for the operating system and infrastructure data.
- **Utility:** Memory capacity with sufficient performance storage capacity to improve analysis and reporting functions for workloads like endpoint security and management.
- **Multifunction:** A balance of memory and storage with sufficient capacity and performance capable of handling mixed workloads and even light virtualization to help segregate workloads.

HPE Solutions for General Purpose can be easily extended to hybrid cloud for additional disaster recovery options with cloud services from Microsoft Azure or a managed service provider.

Choose your best option today

With your choice of optimized configurations for general purpose IT needs, you can get the power to handle whatever comes your way. Contact your authorized HPE representative to find out more.
